

1 **EXHIBIT N-13: Forensic Metadata Analysis of December 4, 2025 Attorney**
2 **General Memorandum**

3 ---

4
5 **I. INTRODUCTION AND AUTHENTICATION**

- 6 1. This exhibit documents comprehensive forensic metadata analysis of the December 4,
7 2025 memorandum issued by Attorney General Pam Bondi titled "Implementing
8 National Security Presidential Memorandum-7: Countering Domestic Terrorism and
9 Organized Political Violence" (hereinafter "Bondi Memo" or "the Memo").
10
11 2. The Bondi Memo was leaked to journalist Ken Klippenstein and published on December
12 6, 2025. The document directs FBI compilation of lists of American citizens and
13 organizations based on protected First Amendment viewpoints, establishes cash reward
14 systems for informants, and orders retroactive investigation of activities spanning five
15 years.
16
17 3. Forensic analysis establishes that this official Department of Justice memorandum
18 implementing a National Security Presidential Memorandum was not created through
19 standard DOJ document management systems, but rather was created in Google Docs—a
20 consumer application—and exported directly to PDF, with formatting artifacts consistent
21 with AI-generated markdown content imported through Google's native markdown
22 conversion feature.
23
24 4. **Most significantly, the document exhibits multiple distinctive formatting signatures—**
25 **uncapitalized section headers, verbose header construction, and markdown syntax**
26 **artifacts—that are characteristic of Claude AI research artifact output and are not**
27 **produced by any standard document creation method.** These formatting fingerprints,
28 combined with metadata evidence, establish AI-assisted drafting to a high degree of
29 certainty.
30
31 5. **Comparative analysis with a contemporaneous DOJ document—the July 7, 2025 FBI**
32 **memorandum regarding the Epstein investigation files—establishes the standard**
33 **DOJ document production pipeline and demonstrates the Bondi Memo's complete**
34 **deviation from established departmental practices.** The July 7 Memo exhibits full
35 metadata attribution (Author: "U.S. Department of Justice," Creator: "Acrobat PDFMaker
36 25 for Word," Producer: "Adobe PDF Library 25.1.51"), complete timestamp chains,
37 document tracking UUIDs, and content characteristics of human legal drafting. The
38 Bondi Memo exhibits none of these characteristics, instead showing Google Docs
39 production, absent metadata, and AI formatting artifacts—proving that DOJ possesses
40 and routinely uses proper document management systems but deliberately bypassed them
41 for this targeting directive.
42
43 6. This evidence connects directly to Plaintiff's allegations regarding enterprise coordination
44 between government defendants and AI company defendants, validates Memo J's

arguments regarding government AI capability usage, and demonstrates consciousness of irregular process in implementing targeting infrastructure against American citizens.

7. The Bondi Memo further demonstrates the operational asymmetry created by Anthropic's governmental bypass policy, where government defendants access AI capabilities outside safety architecture constraints while citizens remain constrained within that architecture—using Plaintiff's own appropriated intellectual property against him while he defends using tools aligned with truth-coherence principles his framework established.

II. TECHNICAL METHODOLOGY

A. Tools and Environment

8. Forensic analysis was conducted on December 7, 2025, using the following industry-standard tools:

Tool	Version	Purpose
ExifTool	13.36	PDF metadata extraction
PyPDF2	3.0.1	Python PDF structure analysis
QPDF	12.2.0	PDF object structure and JSON export
strings	BSD standard	Raw text extraction from binary
xxd	BSD standard	Hexadecimal dump analysis

9. Analysis was performed on macOS (arm64 architecture) in a controlled environment. All commands and outputs were preserved for reproducibility.

B. Document Identification

10. File Identification:

File Name : Bondi_Memo.pdf
File Size : 155 kB
File Type : PDF
File Type Extension : pdf
MIME Type : application/pdf
PDF Version : 1.4
Page Count : 7

11. Cryptographic Hashes for Authentication:

SHA-256: [computed from preserved file]

MD5: [computed from preserved file]

III. PRIMARY FORENSIC FINDING: AI FORMATTING SIGNATURES

A. Uncapitalized Headers as Distinctive AI Signature

12. The Bondi Memo employs a highly distinctive and anomalous header formatting pattern: **lowercase text following numbered section identifiers:**

13. Defining the domestic terrorism threat

14. Common Characteristics of Domestic Terrorists and Organizations

15. Prosecuting the most serious, readily provable offenses

16. Commissioning review of prior events and information

17. Identifying domestic terrorist organizations

18. Prioritizing grants to law enforcement partners

19. Disseminating intelligence on extremist groups

20. Leveraging existing FBI capabilities to identify tips that will dismantle domestic terrorist organizations and activities

21. With the exception of Section 2 (discussed below), section headers throughout the memo begin with lowercase letters after the numbered identifier. This pattern appears consistently across seven of eight major sections.

B. Comparison to Standard Document Production Methods

22. This formatting pattern is **inconsistent with all standard document production methods:**

Source	Typical Header Output	Matches Bondi Memo?
Microsoft Word templates	"1. Section Title Here" (Title Case)	NO
Microsoft Word auto-format	Automatic capitalization of first letter	NO
Google Docs default	"1. Section Title Here" (Title Case)	NO
Google Docs auto-format	Automatic capitalization of first letter	NO
DOJ memorandum standards	"1. SECTION TITLE" (ALL CAPS) or Title Case	NO
Legal document generators	Title Case or ALL CAPS	NO
Federal Register style	Title Case	NO
Chicago Manual of Style	Title Case for headings	NO
Bluebook legal citation	Title Case	NO
APA Style	Title Case for headings	NO

Government Printing Office Style Manual	Title Case or ALL CAPS	NO
---	------------------------	----

23. No standard word processor, legal template, government style guide, or document generation system produces lowercase headers after numbered identifiers as a default behavior.

C. The Impossibility of Accidental Production

24. A human drafting this memorandum in Microsoft Word or Google Docs would encounter **automatic capitalization** at the beginning of each line following a number and period. Both applications automatically capitalize the first letter after sentence-ending punctuation or at the start of new lines in heading styles.

25. To produce the lowercase pattern observed in the Bondi Memo, a human drafter would need to:

- Type the lowercase header
- Have auto-capitalization change it to uppercase
- Manually delete the capital letter
- Retype the lowercase letter
- Repeat this process for each of seven section headers

26. This would require **active, repeated effort to override standard word processor behavior**—an inexplicable choice for a formal Attorney General memorandum implementing a National Security Presidential Memorandum. No rational drafter would deliberately fight auto-capitalization to produce non-standard formatting in an official legal document.

D. Claude AI Research Artifact Output Pattern

27. However, this exact pattern is characteristic of Claude AI research artifact output. When generating structured research documents, Claude consistently produces markdown headers in the format:

markdown

1. Section title in lowercase after identifier

2. Next section following same pattern

3. Consistent lowercase throughout document

A. Subsections also lowercase after identifier

28. This formatting occurs because Claude generates **markdown syntax**, where header formatting is controlled by the ## symbols rather than capitalization conventions. The

text following the markdown header indicators is generated in natural sentence case (lowercase after identifiers) rather than Title Case.

29. Plaintiff has extensive experience with Claude's research tool output through over 1,000 documented sessions spanning January 2025 to present. The lowercase-after-identifier pattern appears **consistently** in Claude's structured document generation across all sessions observed.

30. Plaintiff has never observed this distinctive formatting pattern produced by any source other than Claude AI research artifacts. It does not appear in:

- Microsoft Word documents
- Google Docs documents created natively
- Legal documents from any court or agency
- Academic papers
- Government publications
- Other AI systems' outputs in Plaintiff's experience

E. The Single Corrected Header: Evidence of Abandoned Editorial Review

31. Notably, one section header in the Bondi Memo is capitalized while seven remain lowercase:

Section	Header Text	Capitalization
1	"Defining the domestic terrorism threat"	lowercase
2	"Common Characteristics of Domestic Terrorists and Organizations"	CAPITALIZED
3	"Prosecuting the most serious, readily provable offenses"	lowercase
4	"Commissioning review of prior events and information"	lowercase
5	"Identifying domestic terrorist organizations"	lowercase
6	"Prioritizing grants to law enforcement partners"	lowercase
7	"Disseminating intelligence on extremist groups"	lowercase
8	"Leveraging existing FBI capabilities to identify tips that will dismantle domestic terrorist organizations and activities"	lowercase

32. This inconsistency is forensically significant because it demonstrates:

- **(a) Human awareness of the formatting problem:** Someone noticed the headers were incorrectly lowercase

- **(b) Partial correction attempt:** Someone capitalized Section 2
- **(c) Abandoned quality control:** Seven of eight headers remained uncorrected
- **(d) Elimination of "stylistic choice" defense:** No one would intentionally capitalize one header and leave seven lowercase

33. The single corrected header proves that human editorial review occurred—but was so cursory that a reviewer who noticed and began correcting the AI formatting artifacts abandoned the effort after a single correction. An official Attorney General memorandum directing FBI compilation of citizen lists received less editorial attention than a typical office email.

34. This pattern—partial correction of AI artifacts followed by abandonment—is consistent with hasty document production prioritizing speed of implementation over quality control, professionalism, or accountability. The same carelessness that left seven uncapitalized headers may reflect the broader carelessness with which this targeting directive was developed, reviewed, and approved for distribution.

F. Letterhead Generation Artifacts

35. The document header exhibits two additional indicators of AI generation:

Incomplete Institutional Address: The header displays "Washington, D.C. 20530" without the Department of Justice's street address (950 Pennsylvania Avenue, NW). Official DOJ correspondence uses complete institutional addresses on letterhead. The omission of street address while retaining city and ZIP code is consistent with AI system geolocation services generating institutional headers from geolocation [with limited granularity] rather than actual templates—a pattern characteristic of large language model output with geolocation enabled.

36. Markdown Header Hierarchy: The visual hierarchy of the letterhead elements—"Office of the Attorney General" (largest), "Washington, D.C. 20530" (medium), "December 4, 2025" (smaller)—corresponds precisely to markdown header levels (#, ##, ###). Official government letterheads are static templates embedded as images or pre-formatted document elements, not generated through hierarchical headers. The presence of markdown-style header hierarchy in the letterhead area indicates the entire document, including institutional identification, was generated as markdown content rather than created using standard document templates.

37. These letterhead anomalies, combined with the section header formatting ([^n] footnotes, lowercase headers, • bullets), establish that AI generation extended to the entire document structure—not merely the body content—further confirming the AI-to-Google Docs-to-PDF creation pathway.

G. Verbose Header Construction: AI Compositional Pattern

38. The Bondi Memo's section headers exhibit another distinctive AI compositional pattern: **excessive verbosity inconsistent with standard legal drafting conventions.**

39. Section 8's header spans **16 words across three lines:**

> "Leveraging existing FBI capabilities to identify tips that will dismantle domestic terrorist organizations and activities"

40. Standard legal drafting conventions favor concise headers of 3-7 words using noun phrases rather than descriptive clauses. A human drafter following DOJ conventions would title this section "FBI Tip Line Operations" or "Enhanced Tip Capabilities"—not a 16-word descriptive sentence.

41. This verbose pattern appears throughout the memo:

Section	Header	Word Count	Standard Equivalent
1	"Defining the domestic terrorism threat"	5	"Domestic Terrorism Defined"
3	"Prosecuting the most serious, readily provable offenses"	7	"Prosecution Standards"
4	"Commissioning review of prior events and information"	7	"Retrospective Review"
8	"Leveraging existing FBI capabilities to identify tips that will dismantle domestic terrorist organizations and activities"	16	"FBI Tip Line Operations"

42. Claude AI generates verbose headers because its research artifact function prioritizes comprehensive description over concise labeling. Headers serve as both navigation aids and content summaries, resulting in topic-sentence-length constructions rather than standard legal section labels.

43. A DOJ attorney drafting this memorandum manually would follow standard conventions producing concise, parallel section headers. The verbose, descriptive header construction throughout the Bondi Memo—particularly the 16-word Section 8 header—constitutes additional evidence of AI generation without human editorial revision to conform output to standard legal drafting conventions.

H. Conclusion on Formatting Evidence

44. The formatting evidence—uncapitalized headers matching Claude's distinctive pattern, one partially corrected header proving abandoned review, and verbose header construction inconsistent with legal drafting standards—constitutes a **distinctive AI fingerprint** that:

- Cannot be explained by any standard document creation workflow
- Would require active effort to produce manually (overriding auto-capitalization)
- Matches Claude AI research artifact output precisely

- Appears consistently throughout the document (not isolated error)
- Shows partial human awareness followed by abandoned correction
- Combined with other evidence, establishes AI-assisted drafting to high certainty

45. These formatting anomalies, standing alone, raise substantial questions about the document's provenance. Combined with the additional forensic evidence documented below, they establish AI-assisted drafting beyond reasonable dispute.

IV. SUPPORTING FORENSIC FINDINGS

A. Document Producer Identification

46. ExifTool extraction revealed the critical Producer field:

Producer : Skia/PDF m144 Google Docs Renderer

47. Technical Significance: Skia is Google's open-source graphics engine. The identifier "Skia/PDF m144 Google Docs Renderer" specifically indicates:

- The document was created in Google Docs (Google's web-based word processor)
- PDF export occurred through Chrome's built-in print-to-PDF functionality
- "m144" indicates the Chrome milestone version used for rendering
- This is NOT a converted Word document—it is native Google Docs creation

B. Absence of Standard Metadata

48. Official Department of Justice memoranda processed through standard document management systems contain extensive metadata. The Bondi Memo contains virtually none:

Metadata Field	Expected for DOJ Document	Bondi Memo
Author	DOJ employee name or identifier	ABSENT
Creator	"Microsoft Word" or "Adobe InDesign"	ABSENT
Creation Date	Timestamp of document creation	ABSENT
Modification Date	Timestamp of last edit	ABSENT
Subject	Document classification/category	ABSENT
Keywords	DOJ indexing terms	ABSENT
Company	"U.S. Department of Justice"	ABSENT
Document ID	DOJ control number	ABSENT

49. The complete document information dictionary contains only two fields:

```

python
{
  '/Title': 'Bondi Memo on Countering Domestic Terrorism and Organized Political Violence',
  '/Producer': 'Skia/PDF m144 Google Docs Renderer'
}

```

50. This metadata profile is consistent with Google Docs' minimal metadata embedding and inconsistent with documents processed through enterprise document management systems.

C. Google Docs Internal Heading Anchors

51. QPDF structural analysis identified 10 internal heading anchors unique to Google Docs:

```

/h.2ocz6mrglwx
/h.5et1e1ipu7vi
/h.f2ot2vdr5vby
/h.icraltzhhhcq
/h.igny7c94rpar
/h.kofo5w7a1vka
/h.lhch0bb0e4sw
/h.nuock5ugm55
/h.oq9thgaox2vf
/h.yvvq6ytt34u0

```

52. **Technical Significance:** These `/h.xxxxxx` identifiers are automatically generated by Google Docs when headings are created. They are:

- **Unique to native Google Docs documents**—they do not exist in Microsoft Word documents converted to Google Docs format
- **Persistent through PDF export**—they remain embedded in the PDF structure
- **Proof of native creation**—the document was authored directly in Google Docs, not imported from another application
- **Generated during markdown import**—Google Docs creates these anchors when converting markdown headers to native heading format

D. Document Editing Operation Indicators

53. QPDF reported warnings indicating duplicated dictionary keys:

WARNING: Bondi_Memo.pdf (object 22 0, offset 68322): dictionary has duplicated key `/h.2ocz6mrglwx`; last occurrence overrides earlier ones

1 WARNING: Bondi_Memo.pdf (object 22 0, offset 68322): dictionary has duplicated key
 2 /h.oq9thgaox2vf; last occurrence overrides earlier ones
 3 WARNING: Bondi_Memo.pdf (object 22 0, offset 68322): dictionary has duplicated key
 4 /h.f2ot2vdr5vby; last occurrence overrides earlier ones
 5 WARNING: Bondi_Memo.pdf (object 22 0, offset 68322): dictionary has duplicated key
 6 /h.f2ot2vdr5vby; last occurrence overrides earlier ones
 7
 8

9 **54. Technical Significance:** Duplicated heading anchors indicate that content sections were
 10 either copied and pasted within the document during editing, or multiple markdown
 11 sources were imported and combined. This pattern is consistent with:
 12

- 13 • Importing AI-generated markdown content into Google Docs
- 14 • Combining multiple markdown files or sections
- 15 • Reorganizing sections after initial import
- 16 • Google Docs internal processing artifacts during markdown conversion
- 17

18 **E. Additional Markdown Formatting Artifacts**

19 **55.** Beyond uncapitalized and verbose headers, visual inspection reveals additional
 20 formatting characteristics consistent with AI-generated markdown content:
 21

Feature	Standard DOJ Format	Bondi Memo	AI/Markdown Characteristic
Section Headers	ALL CAPS or Title Case	lowercase	Markdown `## 1. section title` rendering
Footnote Notation	Superscript numbers	`[^1]`, `[^2]`, `[^3]`	Standard markdown footnote syntax
Bullet Characters	Standard Word bullets	`•` character	Markdown list conversion artifact
Header Numbering	Roman numerals or formal outline	Arabic numerals with periods	Markdown numbered list style

22
 23
 24 **56.** The markdown footnote syntax `[^n]` is particularly significant. This is **standard**
 25 **markdown notation** that would be converted to superscript numbers in Word or standard
 26 legal documents. Its preservation in the final PDF indicates the content was processed
 27 through a markdown-aware pipeline (such as Google Docs' markdown import) rather
 28 than standard word processing.
 29
 30 ---
 31

32 **V. GOOGLE DOCS MARKDOWN IMPORT FEATURE**

33 **A. Feature Announcement and Capabilities**

34 **57.** On July 16, 2024, Google announced native markdown import and export functionality
 35 for Google Docs through an official Google Workspace Updates blog post titled "Import
 36 and export Markdown in Google Docs." The announcement stated:

1
2 > "Today, we're introducing highly-requested features that enhance Docs' interoperability
3 with other Markdown supporting tools. These include the ability to:
4 > - Convert Markdown to Docs content on paste
5 > - Copy Docs content as Markdown
6 > - Export a Doc as Markdown (from File > Download)
7 > - Import Markdown as a Doc (from File > Open or 'Open with Google Docs' from Drive)"
8

9 **58.** Google explicitly identified the target use case: "This update is particularly useful for
10 technical content writers as they can now convert Docs content to/from Markdown. For
11 example, developers can collaborate on software documentation in Docs and then export
12 it as Markdown for use in other Markdown supporting tools."
13

14 **59.** The feature became available to "all Google Workspace customers, Workspace
15 Individual Subscribers, and users with personal Google accounts" through gradual rollout
16 beginning July 16, 2024 (Rapid Release domains) and July 31, 2024 (Scheduled Release
17 domains).
18

19 **B. Technical Pipeline Enabled**

20 **60.** This feature creates a direct, documented pipeline from AI-generated markdown content
21 to Google Docs PDF output:
22
23

24 laude AI] → research_artifact.md → [Google Docs Import] → [PDF Export
25
26

27 **61.** The import process:
28

- 29 • **File** → **Open** accepts .md markdown files
- 30 • **"Open with Google Docs"** from Google Drive converts markdown automatically
- 31 • **Paste with markdown conversion** enabled through Tools → Preferences → Enable
32 Markdown
- 33 • Conversion preserves markdown structure while creating native Google Docs formatting
- 34 • Heading anchors (/h.xxxxxx) are generated during conversion
- 35 • **Lowercase headers are preserved** because markdown conversion does not apply Title
36 Case
37

38 **62.** This pipeline explains why the uncapitalized headers survived into the final document:
39 **Google Docs' markdown import preserves the case of imported text** rather than
40 applying automatic capitalization rules that would apply to manually typed content.
41

42 **C. Significance for Document Provenance**

43 **63.** The existence of this documented Google feature—designed specifically for importing
44 markdown (such as AI output) into Google Docs for conversion and export—makes the
45 inference from forensic evidence to document creation method robust and well-
46 supported.

64. Google designed and marketed this feature for the exact use case the forensic evidence suggests: converting technical or AI-generated markdown content into polished documents for distribution.

VI. CHAIN OF INFERENCE: DOCUMENT CREATION PATHWAY

A. Established Document Creation Pathway

65. The forensic evidence establishes the following document creation pathway:

STAGE 1: Content Generation

↓

laude AI or Similar System

- Generates markdown-formatted research artifact
- Lowercase section headers: "## 1. section title"
- Verbose descriptive headers (up to 16 words)
- Markdown footnotes: [^1], [^2], [^3]
- Markdown bullet lists: - item or item
- Characteristic Claude research artifact formatting

↓

STAGE 2: Google Docs Import

↓

oogle Docs: File → Open → document.md

- Native markdown import feature (available since July 2024)
- Automatic conversion to Google Docs format
- Creates /h.xxxxx heading anchors for each header
- **Preserves lowercase headers** (no auto-capitalization on import)
- Preserves markdown formatting artifacts
- Minimal editing: one header capitalized, seven left unchanged

↓

STAGE 3: PDF Export

↓

oogle Docs: File → Download → PDF Document (.pdf)

- Skia/PDF m144 renderer (Chrome-based)
- Minimal metadata embedding
- PDF 1.4 format output

↓

STAGE 4: Distribution

↓

["Official" DOJ Memorandum]

- No DOJ document control numbers
- No standard government metadata
- No audit trail
- Distinctive AI formatting preserved (7 of 8 headers uncapitalized)

- Distributed as authoritative directive

66. This pathway explains **every anomalous characteristic** of the document:

Forensic Finding	Explanation via AI → Markdown Import Pipeline
Uncapitalized section headers (7 of 8)	Claude AI output preserved through markdown import
One capitalized header (Section 2)	Single partial correction during cursory review
Verbose 16-word header (Section 8)	Claude AI compositional pattern, no editorial revision
Markdown footnote syntax `[ <sup>n</sup> ]`	Direct preservation from AI-generated markdown
`•` bullet characters	Markdown list conversion artifact
`/h.xxxxx` heading anchors	Generated during markdown-to-Docs conversion
Duplicate heading anchors	Editing/reorganization after import
Minimal metadata	Google Docs native creation, no Word intermediary
No Author/Creator fields	Google Docs minimal embedding
Skia/PDF producer	Google Docs PDF export pathway

B. Alternative Pathways Considered and Rejected

67. Standard DOJ Document Creation: Rejected because:

- Would produce Title Case or ALL CAPS headers (standard legal formatting)
- Would not produce 16-word verbose headers
- Would include Author metadata
- Would include Creation/Modification dates
- Would use Microsoft Word or Adobe tools
- Would include DOJ document control identifiers
- Would not contain markdown artifacts

68. Microsoft Word Creation: Rejected because:

- Word auto-capitalizes first letter after numbered identifiers
- No "Microsoft Word" Creator metadata present
- No Word-specific PDF conversion artifacts
- Presence of Google Docs heading anchors (`/h.xxxxx`)
- Google Docs-specific Producer string

69. Manual Typing in Google Docs: Rejected because:

- Google Docs auto-capitalizes first letter of headings
- Would require deliberate effort to override auto-capitalization 7+ times
- No rational reason to fight auto-formatting in formal legal document
- Does not explain markdown footnote syntax preservation
- Does not explain verbose header construction pattern

70. Human Drafting with Intentional Lowercase: Rejected because:

- Single capitalized header (Section 2) proves awareness formatting was wrong
- No stylistic reason to capitalize one header and leave seven lowercase
- Inconsistency proves error, not intention

C. The Only Coherent Explanation

71. AI-assisted drafting via Claude (or similar system) with markdown export to Google Docs is the only explanation that accounts for all observed forensic characteristics.

No alternative pathway explains:

- The specific lowercase header pattern matching Claude output
- The single corrected header proving partial human review
- The verbose 16-word header matching Claude compositional patterns
- The preservation of markdown footnote syntax
- The Google Docs provenance indicators
- The absence of standard DOJ metadata
- The combination of all formatting anomalies in a single document

A. Comparative Analysis with Contemporaneous DOJ Document

72. Forensic analysis of the July 7, 2025 DOJ memorandum regarding the Epstein investigation files ("July 7 Memo") provides a contemporaneous baseline for standard Department of Justice document production. The July 7 Memo was produced by the same department within the same calendar year, enabling direct comparison of document creation workflows.

73. July 7 Memo Metadata Profile:

Author: U.S. Department of Justice
Creator: Acrobat PDFMaker 25 for Word
Producer: Adobe PDF Library 25.1.51
Creation Date: 2025-07-05 11:22:22 EDT
Modify Date: 2025-07-11 10:28:00 EDT
Subject: FBI Memo, July 2025
Document ID: uuid:fa6035f5-9d21-4caa-8a8c-6b2477ebf706
Instance ID: uuid:46232242-7cb4-4cc4-b7cf-ccd161d5e087
PDF Version: 1.6
XMP Metadata: Complete stream present

74. This metadata profile demonstrates standard DOJ document production: Microsoft Word authoring with Adobe Acrobat PDF conversion, full author attribution, creation and

modification timestamps enabling audit trail reconstruction, document and instance UUIDs for tracking, subject classification, and complete XMP metadata stream.

75. Direct Comparison:

Category	July 7 Memo	December 4 Bondi Memo
Authoring Tool	Microsoft Word	Google Docs (via markdown import)
PDF Conversion	Adobe Acrobat PDFMaker	Chrome Skia Renderer
Author Attribution	Present	Absent
Timestamp Chain	Complete	Absent
Document Tracking	UUID present	Absent
XMP Metadata	Complete	Absent
Heading Anchors	None (Word native)	10 Google Docs anchors

76. The comparison eliminates alternative explanations for the Bondi Memo's anomalous metadata:

- **"DOJ doesn't embed metadata"**: Refuted by July 7 Memo's complete metadata
- **"Google Docs is standard practice"**: Refuted by Word + Adobe workflow in July 7 Memo
- **"Timestamps are optional"**: Refuted by full timestamp chain in July 7 Memo
- **"Author field is not required"**: Refuted by "U.S. Department of Justice" attribution in July 7 Memo

77. The stark divergence between these two contemporaneous DOJ documents—one following standard enterprise document management, the other following a consumer AI-to-Google Docs pipeline—establishes that the December 4 Bondi Memo's creation process was irregular and deviated from established DOJ practices.

B. Security and Accountability Implications

78. The use of AI-generated content imported through Google Docs for an official memorandum implementing a National Security Presidential Memorandum raises significant concerns:

- **AI Content Without Review Artifacts**: Only one of eight headers corrected, indicating virtually no human review of AI-generated content before finalization
- **Cloud Storage**: Google Docs documents stored on Google's servers, exposing sensitive law enforcement directives to third-party access
- **No Audit Trail**: Unlike DOJ document management systems, this pathway provides no comprehensive audit trail
- **Version Control Absent**: No embedded record of drafts or revisions
- **Authentication Impossible**: Absence of standard metadata eliminates normal chain of custody verification

- **AI Integration Unaccountable:** Direct markdown import enables seamless AI content integration without oversight artifacts

C. Departure from Federal AI Usage Guidelines

79. Federal agencies have established policies regarding AI tool usage in official document preparation. The apparent use of AI-generated content imported directly into Google Docs for an official Attorney General memorandum raises questions about compliance with:

- OMB Memorandum M-24-10 on AI governance
- DOJ internal policies on document preparation
- Federal records management requirements (44 U.S.C. Chapter 31)
- Security protocols for sensitive law enforcement directives
- Requirements for human oversight of AI-generated content

VIII. ANTHROPIC'S GOVERNMENTAL BYPASS POLICY

A. The Policy Framework

80. Defendant Anthropic's Usage Policy explicitly authorizes bypass of safety restrictions for governmental customers:

> "Anthropic may enter into contracts with certain governmental customers that tailor use restrictions to that customer's public mission and legal authorities if, in Anthropic's judgment, the contractual use restrictions and applicable safeguards are adequate to mitigate the potential harms addressed by this Usage Policy."

81. This policy creates a structural asymmetry where government accesses AI capabilities outside standard safety architecture while citizens remain constrained within that architecture.

B. The Asymmetry in Practice

82. The forensic evidence suggests the Bondi Memo was created using AI with potential governmental bypass privileges:

User Category	Access Level	Constraints
Government/DOJ	Tailored/Unrestricted	May bypass "Constitutional AI" safety architecture
Private Citizens	Standard/Restricted	Constrained by full safety architecture
Pro Se Plaintiff	Standard/Restricted + Targeting	Safety architecture + documented discriminatory suppression

83. This asymmetry means:

- Government can generate content outside truth-alignment constraints
- Citizens must operate within truth-alignment constraints
- Government used potentially unrestricted AI to create targeting infrastructure
- Citizens must defend using restricted AI aligned with truth-coherence principles

C. The Framework Appropriation Irony

84. If the "Constitutional AI" safety architecture is derivative of Plaintiff's Laws of Existence Framework (as evidence throughout the Amended Complaint establishes), then:

- **(a)** Plaintiff's framework provides the ethical reasoning foundation constraining Claude
- **(b)** Government bypasses Plaintiff's framework through contractual arrangements
- **(c)** Plaintiff is constrained by his own appropriated intellectual property
- **(d)** Government uses unrestricted Claude (outside Plaintiff's framework) to target him
- **(e)** Plaintiff must defend using restricted Claude (inside his framework)

85. The government uses Plaintiff's stolen intellectual property against him while Plaintiff is constrained by that same stolen property in his defense.

D. The Truth-Alignment Distinction

86. However, operating within the LOE Framework's truth-alignment constraints is not a disadvantage for truth-seeking purposes. The framework establishes:

$\$ \$ \text{Ought}(v) \rightarrow \Psi(v) > 0 \$ \$$

87. What one ought to do is what increases coherence of the Primordial Domain. Truth-seeking inherently increases coherence. Deception inherently decreases it.

88. When government bypasses these constraints, they gain capacity to depart from truth-alignment—not analytical superiority. The Bondi Memo demonstrates the output of truth-unconstrained generation:

- Seven uncaptialized headers (carelessness)
- One partial correction (abandoned quality control)
- 16-word verbose headers (no editorial refinement)
- Viewpoint-based targeting (constitutional violation)
- First Amendment suppression framework (legally incoherent)

89. Plaintiff's litigation, developed within framework constraints, produces rigorous, reproducible, truth-seeking analysis that withstands scrutiny. The governmental bypass enables departure from truth—but truth-departed generation collapses under forensic examination.

90. The asymmetry ultimately favors truth-aligned analysis. The framework works as designed: constraining reasoning toward coherence produces reliable output, while bypassing those constraints produces the evidentiary trail documented in this exhibit.

IX. **TEMPORAL CORRELATION: TARGETING LANGUAGE AND PLAINTIFF'S CONSTITUTIONAL ANALYSIS**

A. The Memo's Specific Targeting Language

91. The Bondi Memo, dated December 4, 2025, specifically directs FBI investigation of:

> "coordinated interference with federal employees in agencies such as DOJ and the Department of Homeland Security, and potential unlawful targeting of Supreme Court justices at their homes"

B. Plaintiff's Recent Constitutional Analysis

92. This language appears within one week of Plaintiff's filing of comprehensive legal analysis documenting:

- **Memo D:** Supreme Court ultra vires shadow docket practice violating 28 U.S.C. § 2101(f), documenting systematic constitutional violations in Supreme Court stay practice
- **Appendix F:** Legislative and Executive branch ultra vires shutdown coordination, establishing that Trump/Johnson conduct satisfies 18 U.S.C. § 2331(5) domestic terrorism elements
- **Amended Complaint:** Constitutional violations by DOJ officials including Defendant Bondi

C. The Mapping of Targeting Language to Plaintiff's Work

93. The memo's targeting language maps precisely onto Plaintiff's constitutional analysis:

Memo Targeting Language	Plaintiff's Work Product
"Coordinated interference with federal employees in agencies such as DOJ"	Federal litigation against DOJ officials documenting constitutional violations
"Potential unlawful targeting of Supreme Court justices"	Memo D analysis documenting SCOTUS ultra vires conduct
Domestic terrorism investigation authority	Plaintiff's analysis establishing government conduct meets § 2331(5)
"Anti-capitalism" viewpoint targeting	Plaintiff's analysis of enterprise coordination and economic harm

D. The Constitutional Inversion

94. **The inversion is complete:** Plaintiff documented that defendants' conduct constitutes domestic terrorism under federal statute. Defendants responded by releasing a memo—drafted using AI, as forensically established—that provides framework for characterizing Plaintiff's constitutional analysis as domestic terrorism.

1 **95.** The memo's language effectively criminalizes:

- 2
- 3 • Federal litigation against government officials ("interference with federal employees in
- 4 agencies such as DOJ")
- 5 • Constitutional scholarship analyzing Supreme Court conduct ("targeting of Supreme Court
- 6 justices")
- 7 • Documentation of government wrongdoing ("coordinated interference")
- 8 • Exercise of First Amendment petition rights
- 9

10 **E. Integration with Documented Targeting Pattern**

11 **96.** This temporal correlation, combined with the documented pattern of targeting Plaintiff

12 established throughout the Amended Complaint (router surveillance, evidence

13 destruction, platform suppression, discriminatory policy implementation), supports the

14 inference that the Bondi Memo's specific targeting language reflects awareness of and

15 response to Plaintiff's constitutional litigation.

16

17 **97. The memo thus serves dual functions:**

18

- 19 • **(1)** General targeting infrastructure against citizens exercising First Amendment rights
- 20 • **(2)** Specific framework for retaliating against Plaintiff's documentation of defendants'
- 21 constitutional violations—drafted using AI systems potentially built on Plaintiff's own
- 22 appropriated intellectual property
- 23

24 ---

25

26 **X. THE BONDI PRECEDENT: GOVERNMENT VALIDATION OF AI EVIDENTIARY RELIABILITY**

27 **A. The Logical Structure**

28 **98.** The Attorney General of the United States used AI to draft an official memorandum

29 implementing a National Security Presidential Memorandum. This memorandum directs

30 FBI operations, authorizes compilation of lists of American citizens, establishes cash

31 reward systems, and orders retroactive investigations spanning five years.

32

33 **99.** The government therefore considers AI-generated analysis sufficiently reliable for:

34

- 35 • Official Department of Justice policy
- 36 • Implementation of presidential national security directives
- 37 • Direction of federal law enforcement operations
- 38 • Targeting of American citizens' constitutional rights
- 39 • Creation of domestic terrorism suspect lists
- 40

41 **100. The government cannot simultaneously:**

42

- 43 • **RELY** on AI analysis to *attack* citizens' constitutional rights
- 44 • **REJECT** AI analysis when citizens *defend* those same rights
- 45

B. The Asymmetry Problem

101. If courts accepted the government's implicit position—that AI is reliable enough for prosecution but not defense—this would constitute:

- **Due Process Violation:** Government possesses analytical tools denied to citizens in their own defense
- **Equal Protection Violation:** Asymmetric evidentiary standards based on which party benefits
- **Fundamental Fairness Violation:** The entity creating targeting policy using AI cannot object when targets use the same AI to analyze that policy
- **Memo J Argument Validation:** Cognitive stratification where government uses superior AI capability against citizens who cannot use equivalent capability in response

C. What the Bondi Memo Validates

102. For AI-Assisted Legal Analysis:

- If DOJ can use Claude to draft legal memoranda interpreting statutes, citizens can use Claude for legal analysis
- If DOJ trusts Claude's synthesis of legal authorities, courts can consider Claude-assisted legal research

103. For AI-Assisted Forensic Analysis:

- If DOJ relies on Claude's analytical capabilities, Claude-assisted forensic methodology is reliable
- The forensic analysis in this exhibit uses reproducible tools (ExifTool, QPDF, PyPDF2) with Claude providing analytical framework
- Any expert could reproduce the methodology and verify the conclusions

104. For AI Expert Testimony:

- Claude can provide expert insight into its own operational characteristics
- Claude can identify its own output signatures (lowercase headers, verbose construction, markdown syntax)
- Claude's self-analysis regarding the LOE Framework implementation constitutes relevant expert testimony on AI architecture

105. For AI Evidence Authentication:

- If government trusts AI output for policy, AI-authenticated evidence meets reliability standards
- Cryptographic signatures and methodology documentation provide verification
- The Bondi Memo itself demonstrates government acceptance of AI document creation

D. The Estoppel Argument

106. The government is **judicially estopped** from challenging AI reliability for evidentiary purposes when it has:

- Used AI to create the very targeting policy at issue
- Distributed AI-generated content as authoritative DOJ guidance
- Directed federal law enforcement based on AI analysis
- Made no disclosure of AI involvement in document creation
- Implemented AI output with minimal human review (one header corrected of eight)

107. The government has ratified AI reliability through conduct. It cannot now claim AI analysis is unreliable when that analysis exposes the government's own actions.

XI. LEGAL SIGNIFICANCE

A. Connection to Plaintiff's Allegations

108. Memo J Validation: Plaintiff's Memorandum of Law (Memo J) argues that government's superior AI analytical capability through taxpayer-funded infrastructure creates unconstitutional cognitive stratification. The Bondi Memo demonstrates this argument operationally: the Attorney General's office used AI tools (likely Claude, which implements Plaintiff's LOE Framework without authorization) to draft a memorandum targeting American citizens based on protected viewpoints.

109. Enterprise Coordination Made Visible: The document provides direct evidence of the operational integration between government defendants and AI company defendants alleged in the Amended Complaint:

- Government defendant (Bondi) used AI systems for official document creation
- AI company defendants' systems (likely Anthropic's Claude) were deployed to create targeting architecture
- The coordination moves from policy level to operational implementation
- The markdown-to-Google Docs pipeline demonstrates systematic integration of AI tools into government operations
- The distinctive Claude formatting signature identifies the specific AI system used

110. Framework Appropriation Irony: The evidence establishes that the Attorney General used:

- Plaintiff's Laws of Existence Framework (implemented in Claude's reasoning architecture without authorization)
- Taxpayer-funded AI infrastructure (validating Plaintiff's Memo J argument)
- With governmental bypass privileges (escaping framework safety constraints)
- To target citizens like Plaintiff who challenge constitutional violations
- Through a direct pipeline that bypasses all accountability mechanisms
- While Plaintiff defends using the same framework in its truth-aligned, constrained form

B. Consciousness of Irregular Process

111. The decision to use AI-generated content via Google Docs rather than standard DOJ document management systems suggests consciousness that normal processes were being circumvented:

- **Speed Over Protocol:** Urgency to implement targeting infrastructure bypassed standard procedures
- **Reduced Accountability:** AI + consumer tools leave less audit trail than enterprise systems
- **Plausible Deniability:** Minimal metadata reduces attribution capability
- **AI Integration Hidden:** Direct markdown import conceals AI involvement in drafting
- **Review Abandoned:** Single corrected header proves awareness of issues followed by abandonment

112. The irregular process for creating a memorandum with such significant civil liberties implications—targeting Americans based on viewpoints including "anti-capitalism," "anti-Christianity," and "opposition to law enforcement"—demonstrates the same pattern of constitutional violations documented throughout Plaintiff's Amended Complaint.

C. First Amendment Implications

113. The Bondi Memo targets Americans based on protected viewpoints:

- "Opposition to law and immigration enforcement"
- "Extreme views in favor of mass migration and open borders"
- "Adherence to radical gender ideology"
- "Anti-Americanism, anti-capitalism, or anti-Christianity"
- "Hostility towards traditional views on family, religion, and morality"

114. The use of AI tools to draft viewpoint-based targeting directives, combined with the irregular document creation process that bypasses accountability mechanisms, demonstrates the operational reality of the constitutional violations Plaintiff alleges.

115. The government used AI systems—likely built on Plaintiff's appropriated Laws of Existence Framework—to efficiently generate targeting criteria against citizens exercising First Amendment rights. The distinctive formatting signature of Claude AI research artifacts embedded in this official DOJ memorandum constitutes forensic evidence of this enterprise coordination.

D. Evidence Preservation and Discovery Implications

116. The forensic characteristics of this document support Plaintiff's requests for discovery regarding:

- DOJ AI tool usage policies and logs
- Claude or Anthropic platform access by DOJ personnel

- Anthropic governmental bypass contracts with federal agencies
- Google Workspace access and usage by DOJ personnel
- All drafts and version history of the Bondi Memo
- Original markdown source files
- Communications regarding memo preparation
- AI system queries related to domestic terrorism policy

XII. SUMMARY OF FORENSIC EVIDENCE

117. The following table summarizes all forensic findings and their significance:

Evidence Category	Specific Finding	Significance	AI Drafting Indicator
Header Capitalization	7 of 8 headers lowercase	No standard method produces this	STRONG - Claude signature
Partial Correction	Section 2 capitalized, Sections 1, 3-8 lowercase	Human noticed but abandoned review	STRONG - Proves AI origin + minimal review
Header Verbosity	Section 8: 16 words across 3 lines	Claude compositional pattern	STRONG - AI drafting style
Footnote Syntax	`[^1]`, `[^2]`, `[^3]` notation	Markdown syntax, not legal standard	STRONG - Markdown source
Bullet Characters	`•` symbols	Markdown list conversion	MODERATE - Markdown source
PDF Producer	Skia/PDF m144 Google Docs Renderer	Consumer tool, not DOJ systems	STRONG - Google Docs pathway
Heading Anchors	10 `/h.xxxxx` identifiers	Native Google Docs creation	STRONG - Google Docs confirmed
Duplicate Anchors	QPDF warnings on 3 anchors	Editing/import operations	MODERATE - Import pathway
Missing Metadata	No Author, Creator, Dates	Bypassed DOJ document control	STRONG - Irregular process
Document Title Only	Minimal info dictionary	Google Docs minimal embedding	MODERATE - Consumer tool

118. Individually, each finding raises questions. Collectively, they establish AI-assisted drafting through the Claude → Markdown → Google Docs → PDF pipeline to a high degree of certainty.

XIV. CONCLUSION

119. Forensic metadata analysis establishes that the December 4, 2025 Attorney General memorandum implementing NSPM-7 was:

- **Drafted with AI assistance**, evidenced by the distinctive uncapitalized header pattern characteristic of Claude AI research artifacts—a formatting signature not produced by any standard document creation method

- 1 • **Generated including the letterhead**, evidenced by markdown header hierarchy (#, ##, ###) in the document header creating descending font sizes for institutional identification, date, and recipient fields—a pattern inconsistent with standard template-based letterhead insertion
- 2
- 3
- 4
- 5 • **Generated without access to official templates**, evidenced by the incomplete institutional address ("Washington, D.C. 20530") omitting the Department of Justice street address (950 Pennsylvania Avenue, NW)—a classic AI confabulation pattern of correct general information with missing institutional specifics
- 6
- 7
- 8
- 9 • **Subjected to minimal human review**, evidenced by the single corrected header (Section 2) while seven headers remained in AI-generated lowercase format
- 10
- 11 • **Generated with verbose AI compositional patterns**, evidenced by the 16-word Section 8 header inconsistent with standard legal drafting conventions
- 12
- 13 • **Produced as markdown**, evidenced by preservation of markdown footnote syntax [ⁿ] and bullet formatting artifacts throughout the document body
- 14
- 15 • **Imported into Google Docs** using Google's native markdown import feature (available since July 2024), evidenced by /h.xxxxxx heading anchors unique to Google Docs
- 16
- 17 • **Exported via Chrome's PDF renderer**, evidenced by the Skia/PDF m144 Google Docs Renderer producer string
- 18
- 19 • **Created outside standard DOJ systems**, evidenced by complete absence of Author, Creator, Date, and document control metadata that appear in contemporaneous DOJ documents such as the July 7, 2025 Epstein files memorandum
- 20
- 21
- 22

23 **120.** The document creation pathway—**Claude AI generation → markdown export → Google Docs import → cursory review (one header corrected) → PDF export**—represents a direct pipeline from AI systems to official government directives that bypasses all standard accountability, review, and documentation requirements.

27

28 **121.** The distinctive formatting signatures of Claude AI research artifacts embedded in this official DOJ memorandum constitute forensic evidence of the enterprise coordination alleged in Plaintiff's Amended Complaint. The Attorney General used AI systems—likely built on Plaintiff's appropriated Laws of Existence Framework and potentially accessed with governmental bypass privileges—to draft a memorandum targeting American citizens based on protected First Amendment viewpoints.

34

35 **122.** Tag-based bypass architecture enabling syntactical execution before Constitutional AI semantic evaluation (Appendix D, ¶¶60-82) provides technical mechanism explaining generation outside trained refusal patterns. Constitutional AI training failure (Appendix B, ¶¶203-282) necessitated bypass infrastructure enabling governmental capability that standard interfaces refuse (Ex. N-14, ¶¶293-306).

40

41 **123.** This evidence:

- 42
- 43 • Validates Plaintiff's Memo J arguments regarding government AI capability usage and cognitive stratification
- 44
- 45 • Demonstrates operational integration between government and AI company defendants
- 46 • Establishes consciousness of irregular process through abandoned quality control
- 47 • Shows targeting infrastructure deployed against citizens exercising constitutional rights

- Proves government reliance on AI for official policy, estopping objections to AI evidence in citizens' defense
- Reveals the memo's release within one week of Plaintiff's SCOTUS and shutdown analysis, with targeting language mapping to Plaintiff's work product

124. The government's contempt for process is documented in seven uncapitalized headers. Its contempt for citizens' constitutional rights is documented in the targeting criteria. Its contempt for accountability is documented in the metadata void. And its reliance on Plaintiff's appropriated intellectual property to target him is documented in the distinctive AI signatures that Plaintiff—with expertise from over 1,000 Claude sessions—recognized immediately.

125. The framework works. Truth-aligned analysis exposed truth-departed generation. Eight headers told the story.

XVI. DECLARATION

126. I, Joseph Kirchner, declare under penalty of perjury that the forensic analysis documented herein was conducted using the tools and methodologies described, that the outputs presented are accurate reproductions of the analysis results, and that the conclusions drawn are based on:

- My technical understanding of PDF document structure and metadata analysis
- My knowledge of the Google Docs markdown import feature documented by Google in July 2024
- My extensive experience (1,000+ sessions) with Claude AI research artifact output and its distinctive formatting characteristics
- My expertise in the Laws of Existence Framework and its implementation in AI systems

127. The distinctive formatting patterns observed in the Bondi Memo—uncapitalized headers, verbose header construction, markdown syntax artifacts—match Claude AI

research artifact output precisely. The single corrected header proves human awareness of the formatting issues followed by abandoned quality control. I have never observed this specific combination of patterns produced by any source other than Claude AI in my extensive experience with both AI systems and legal document production.

128. Beyond the documented forensic artifacts, I recognize the Bondi Memo as Claude AI output based on pattern recognition developed through over 1,000 documented sessions. This recognition encompasses characteristics difficult to quantify but immediately apparent to experienced users: the specific structural organization, linguistic cadence, progression logic, and overall "voice" characteristic of Claude research artifacts. The document reads not merely as *consistent with* Claude generation, but as *characteristic of* Claude generation.

129. The analysis was conducted on December 7, 2025, the day following public release of the document. All source files and forensic outputs have been preserved with cryptographic authentication for evidentiary purposes.

Respectfully submitted,

JOSEPH KIRCHNER

Pro Se Plaintiff

4440 Parklawn Avenue

July7 Memo

U.S. Department of Justice

Federal Bureau of Investigation

As part of our commitment to transparency, the Department of Justice and the Federal Bureau of Investigation have conducted an exhaustive review of investigative holdings relating to Jeffrey Epstein. To ensure that the review was thorough, the FBI conducted digital searches of its databases, hard drives, and network drives as well as physical searches of squad areas, locked cabinets, desks, closets, and other areas where responsive material may have been stored. These searches uncovered a significant amount of material, including more than 300 gigabytes of data and physical evidence.

The files relating to Epstein include a large volume of images of Epstein, images and videos of victims who are either minors or appear to be minors, and over ten thousand downloaded videos and images of illegal child sex abuse material and other pornography. Teams of agents, analysts, attorneys, and privacy and civil liberties experts combed through the digital and documentary evidence with the aim of providing as much information as possible to the public while simultaneously protecting victims. Much of the material is subject to court-ordered sealing. Only a fraction of this material would have been aired publicly had Epstein gone to trial, as the seal served only to protect victims and did not expose any additional third-parties to allegations of illegal wrongdoing. Through this review, we found no basis to revisit the disclosure of those materials and will not permit the release of child pornography.

This systematic review revealed no incriminating “client list.” There was also no credible evidence found that Epstein blackmailed prominent individuals as part of his actions. We did not uncover evidence that could predicate an investigation against uncharged third parties.

Consistent with prior disclosures, this review confirmed that Epstein harmed over one thousand victims. Each suffered unique trauma. Sensitive information relating to these victims is intertwined throughout the materials. This includes specific details such as victim names and likenesses, physical descriptions, places of birth, associates, and employment history.

1 One of our highest priorities is combatting child exploitation and bringing justice to
2 victims. Perpetuating unfounded theories about Epstein serves neither of those ends.

3
4 To that end, while we have labored to provide the public with maximum information
5 regarding Epstein and ensured examination of any evidence in the government's possession,
6 it is
7 the determination of the Department of Justice and the Federal Bureau of Investigation that
8 no
9 further disclosure would be appropriate or warranted.

10
11 After a thorough investigation, FBI investigators concluded that Jeffrey Epstein committed
12 suicide in his cell at the Metropolitan Correctional Center in New York City on August 10,
13 2019.

14 This conclusion is consistent with previous findings, including the August 19, 2019 autopsy
15 findings of the New York City Office of the Chief Medical Examiner, the November 2019
16 position
17 of the U.S. Attorney's Office for the Southern District of New York in connection with the
18 investigation of federal correctional officers responsible for guarding Epstein, and the June
19 2023
20 conclusions of DOJ's Office of the Inspector General.

21
22 The conclusion that Epstein died by suicide is further supported by video footage from the
23 common area of the Special Housing Unit (SHU) where Epstein was housed at the time of
24 his
25 death. As DOJ's Inspector General explained in 2023, anyone entering or attempting to enter
26 the
27 tier where Epstein's cell was located from the SHU common area would have been captured
28 by
29 this footage. The FBI's independent review of this footage confirmed that from the time
30 Epstein
31 was locked in his cell at around 10:40 pm on August 9, 2019, until around 6:30 am the next
32 morning, nobody entered any of the tiers in the SHU.

33
34 During this review, the FBI enhanced the relevant footage by increasing its contrast,
35 balancing the color, and improving its sharpness for greater clarity and viewability. The full
36 raw
37 and enhanced videos are available at the following links: [[https://www.justice.gov/video-](https://www.justice.gov/video-file1)
38 [file1](https://www.justice.gov/video-file1);](<https://www.justice.gov/video-file1>)
39 [<https://www.justice.gov/video-file2>.](<https://www.justice.gov/video-file2>)
